Major flooding continued on the Mississippi River from April. At the Thebes river gage, the flood crest of 45.52 feet on the night of May 2 was the second highest crest on record. The record crest was 45.91 feet in May of 1995. A major levee break at Fayville resulted in flash flooding in central and northern parts of the county. Communities outside of levee protection systems, such as Olive Branch, Miller City, and Tamms, were evacuated as floodwaters inundated entire communities and cut off access roads. Many homes and businesses in those communities were sandbagged, but most of them ended up being flooded. Lower portions of the community of Thebes were inundated. The National Guard was requested to assist with sandbagging residences. A water main break caused interruptions in the drinking water supply.

ALEXANDER COUNTY --- CAIRO [37.00, -89.18], 2.8 ESE CAIRO [36.98, -89.13], 2.8 ESE CAIRO [36.99, -89.13], 1.4 S URBANDALE [37.03, -89.18], 0.7 NNE URBANDALE [37.06, -89.17], 0.5 NW URBANDALE [37.05, -89.19]

Record flooding occurred on the Ohio River. At the Cairo river gage, the flood crest of 61.72 feet on the evening of May 2 broke the previous record of 59.50 feet set in 1937. The activation of the New Madrid Floodway by the U.S. Army Corps of Engineers spared Cairo (population 2,800) from an even higher crest that could have easily overtopped the city's levees. With the detonation of the Mississippi River levee at Birds Point, Missouri, the Ohio River dropped suddenly at Cairo. The entire city of Cairo was placed under a mandatory evacuation order as the Ohio River approached the top of the levees protecting the city. Only about 40 people remained behind after the evacuation. Due to heavy rain and backed-up sewers, several blocks within the city experienced basement flooding despite being protected by levees. Some streets in the city were undermined by seepwater. Most routes into and out of the city were blocked by flooding, including Route 3 to the north and both bridges to the south (over the Mississippi and Ohio Rivers). A main rail line that runs through Cairo was shut down due to a large landslide.

FRANKLIN COUNTY --- PLUMFIELD [37.88, -89.00], 2.2 N BENTON MUNI ARPT [38.03, -88.94], 0.7 WSW REND CITY [38.03, -88.99], 0.7 SSE ZEIGLER [37.89, -89.04], 1.0 ENE ROYALTON [37.88, -89.10], 4.2 SE ROYALTON [37.82, -89.07]

Record flooding occurred on the Big Muddy River. At the Plumfield river gage, the river crested at 34.68 feet on the evening of May 3. This exceeded the old record set in 1961 by less than an inch. Illinois Route 148 was closed south of Zeigler, as was County Highway 11. A section of Illinois Route 149 was closed, along with Illinois Route 37 north of West Frankfort. About two dozen homes were flooded, mostly in the Mitchell Lake area of Denning Township. Between five and six feet of water entered some homes. A 62-year-old man was found clinging to a tree after ignoring barricades and driving into swift water on the morning of May 3. The man was treated for hypothermia at a local hospital. His vehicle was washed off the roadway into deep water.

GALLATIN COUNTY --- SHAWNEETOWN [37.70, -88.13], 2.2 NE SALINE MINES [37.65, -88.16], 2.7 N SALINE MINES [37.66, -88.17], 1.7 WNW SHAWNEETOWN [37.71, -88.16], 5.4 NNE SHAWNEETOWN [37.77, -88.08], 5.4 NE SHAWNEETOWN [37.75, -88.05]

Major flooding continued on the Ohio River from April. At the Shawneetown river gage, the flood crest of 56.37 feet on the afternoon of May 6 was about two feet higher than the 1997 flood. This was still over nine feet lower than the record crest set in 1937. Sandbagging operations and some evacuations were conducted in Old Shawneetown, Equality, Junction, and New Haven. These communities are all affected by the Ohio River or its backwater coming up the Saline River. In Equality, floodwaters were four feet high in a church. At least several homes were inundated. In Junction, water was three to four feet deep in one house. About a dozen other homes in Junction were under one to three feet of water. The sewer plants in New Haven and Equality were endangered by flooding. Pumps in Old Shawneetown were overwhelmed by rainwater runoff collecting on the dry side of the levee. This was responsible for considerable flooding in Old Shawneetown even before the Ohio River crested. A number of roads were closed, including the main road into Junction and Route 1. All roads into Old Shawneetown were blocked by authorities to prevent looting and interference from sightseers. A Red Cross shelter was opened in Shawneetown.

HARDIN COUNTY --- CAVE IN ROCK [37.47, -88.17], 0.6 SSE ROSICLARE [37.41, -88.35], 1.0 NNW ROSICLARE [37.43, -88.36], 1.3 NW CAVE IN ROCK [37.48, -88.19]

Location Date/Time Deaths & Property & Event Type and Details Injuries Crop Dmg

Major flooding continued on the Ohio River from April. Based on data from river gages in nearby Pope and Gallatin Counties, the flood crest of 2011 was two to three feet higher than the 1997 flood. This was still 6 to 9 feet lower than the record crest set in 1937. The activation of the New Madrid Floodway by the U.S. Army Corps of Engineers spared Hardin County from an even higher crest that would have inundated even larger areas of the county. With the detonation of the Mississippi River levee at Birds Point, Missouri, the Ohio River stopped rising or rose much more slowly. At least a few riverfront homes in Elizabethtown were flooded up to two feet deep. A few homes in Cave-In-Rock were flooded, and much of the rest of the community was sandbagged. Portions of Illinois Route 1 were closed. A section of Highway 146 was sandbagged to keep it open. A couple of churches were sandbagged in Cave-In-Rock and Elizabethtown. The oldest Baptist church in Illinois sustained flooding damage in Elizabethtown. The National Guard was activated to assist with sandbagging. Flood gates were installed at Rosiclare. Parks and other recreational facilities outside of the levee protection system were flooded. County schools were closed. The ferry from Cave-In-Rock to Crittenden County, KY was shut down.

JACKSON COUNTY --- 1.2 W GRIMSBY [37.75, -89.47], 2.0 W (MDH)CRBNDL/MRFYSBRO [37.78, -89.29], 1.3 W MT CARBON [37.75, -89.35], 2.2 ESE SAND RIDGE [37.72, -89.39], 3.1 SE HOWARDTON [37.60, -89.42], 1.1 N GRAND TOWER [37.65, -89.50]

Record flooding occurred on the Big Muddy River. At the Murphysboro river gage, the river crested at 40.42 feet on the early morning of May 2. This exceeded the old record set in 1961 by over a foot. Illinois Route 127 was closed at the Big Muddy River bridge near Murphysboro. The river was completely over the bridge on Old Route 13. Residents of a trailer park between Illinois Route 13 and the river were asked to evacuate. Flooding approached a Murphysboro neighborhood. The National Guard was activated to assist with sandbagging. The Murphysboro wastewater treatment plant was sandbagged. About a dozen streets were closed and underwater in Murphysboro. U.S. Highway 51 was reduced to one lane north of Carbondale, backing up traffic for miles.

JACKSON COUNTY --- GRAND TOWER [37.63, -89.50], 1.0 SSW GRAND TOWER [37.62, -89.51], 2.6 WNW JOHNS SPUR [37.68, -89.51], 1.8 WNW JOHNS SPUR [37.68, -89.50]

Major flooding continued on the Mississippi River from April. Based on data from a river gage in Alexander County, the flood crest of 2011 was among the five highest crests on record. A voluntary evacuation of the community of Grand Tower was requested, partly due to a leak in a levee along the Big Muddy River. Grand Tower sits at the confluence of the Big Muddy and Mississippi Rivers.

MASSAC COUNTY --- BROOKPORT [37.12, -88.63], METROPOLIS [37.15, -88.73], 0.1 ESE JOPPA [37.20, -88.85], 1.4 E JOPPA [37.20, -88.82], 1.3 NW BROOKPORT [37.14, -88.64]

Major flooding continued on the Ohio River from April. At the Brookport river gage, the flood crest of 57.00 feet on the night of May 5 was about 3.5 feet higher than the 1997 flood. This was still several feet lower than the record crest set in 1937. The activation of the New Madrid Floodway by the U.S. Army Corps of Engineers spared Massac County from an even higher crest that would have inundated even larger areas of Metropolis. With the detonation of the Mississippi River levee at Birds Point, Missouri, the Ohio River stopped rising or rose much more slowly at the Brookport gage. A voluntary evacuation of the city of Brookport was requested due to potential problems with its levees. Most residents east of downtown Metropolis living between U.S. Highway 45 and the river were forced to evacuate as their homes flooded. Some dwellings on the other side of Route 45 were flooded. Several businesses along U.S. Highway 45, mostly car dealerships and restaurants, were forced to close as water crept across the highway near Fort Massac State Park. The highway remained open but reduced to two lanes. A massive sandbagging operation was conducted to attempt to protect many homes and businesses along U.S. 45 from Interstate 24 to the downtown area of Metropolis, as well as Joppa. A couple of nursing homes were evacuated. Schools were closed. Shelters were opened for those who were displaced. A hotel-casino along the Metropolis riverfront was closed for over a month.

POPE COUNTY --- GOLCONDA [37.37, -88.48], 1.5 ENE TANSILL [37.31, -88.50], 1.6 NNW BAY CITY [37.27, -88.51], 1.8 S TANSILL [37.27, -88.53], 2.5 ENE HOMBERG [37.34, -88.51], 1.1 NW GOLCONDA [37.38, -88.49]

Major flooding continued on the Ohio River from April. At the Golconda river gage, the flood crest of 56.89 feet on the afternoon of May 6 was about 3 feet higher than the 1997 flood. This was still almost six feet lower than the record crest set in 1937. The activation of the New Madrid Floodway by the U.S. Army Corps of Engineers spared Pope County from an even higher crest that would have inundated even larger areas of the county. With the detonation of the Mississippi River levee at Birds Point, Missouri, the Ohio River stopped rising or rose much more slowly at the Golconda gage. Due to Ohio River flooding, the floodgates were installed at Golconda. This required that all access roads into and out of Golconda be closed, since those roads pass through the floodwall openings. Schools and government offices were closed due to the effective shutdown of Golconda, the largest town in the county. The town of Golconda was under a voluntary evacuation request. The Golconda post office was moved to a temporary location outside of town. Residents of the tiny community of Hamletsburg were evacuated. All the residents of Hall Town, which is an unprotected area outside the levee protection system, were evacuated as floodwaters engulfed the community. Lusk Creek backed up into Golconda, flooding a street. Residents of the community of Bay City boated to Golconda for emergency supplies. Floodwaters inundated much of the community of New Liberty. Bay Creek Camp was flooded. Backwater flooded rural gravel roads in the Brownfield area.

Major flooding continued on the Ohio River from April. At the Grand Chain river gage, the flood crest of 62.20 feet on the evening of May 2 came within two feet of the record of 64.00 feet set in 1937. The activation of the New Madrid Floodway by the U.S. Army Corps of Engineers spared Pulaski County from an even higher crest. With the detonation of the Mississippi River levee at Birds Point, Missouri, the Ohio River dropped suddenly at Grand Chain.

UNION COUNTY --- WOLF LAKE [37.50, -89.43], 0.9 NW ALDRIDGE [37.56, -89.48], 2.7 W ALDRIDGE [37.55, -89.52], 2.5 SW WARE [37.42, -89.43]

Major flooding continued on the Mississippi River from April. Based on data from a nearby river gage in Alexander County, the flood crest of 2011 was the second highest crest on record. All access roads to the Mississippi River levees were closed. Some residents were isolated by the floodwaters, and one school district cancelled classes. Backwater from the Mississippi River contributed to flooding of Clear Creek, which affected at least one home. Sandbagging operations were conducted to protect water wells in the Clear Creek area, and to reinforce levees. The National Guard was activated to assist with the sandbagging.

WABASH COUNTY --- 2.5 S MT CARMEL [38.38, -87.78], 3.3 SSE KEENSBURG [38.30, -87.85], 2.2 ESE COWLING [38.31, -87.89], 0.7 S MT CARMEL [38.41, -87.77], 3.0 NE ALLENDALE [38.56, -87.69], 4.0 ENE ALLENDALE [38.55, -87.65]

Record flooding occurred on the Wabash River. At the Mount Carmel river gage, the river crested at 34.02 feet on May 3. The old record that was set in the January, 2005 flood was broken by less than an inch. A restaurant was surrounded by water. Some residences were inaccessible due to flooded roadways. Several roads were flooded, even inside the city of Mount Carmel. Backwater from the Wabash River contributed to flooding of Greathouse Creek, which spilled onto a couple of streets and properties in Mount Carmel. Sandbagging was done to reinforce a section of levee.

WHITE COUNTY --- 2.1 S CONCORD [37.94, -88.12], 2.4 NW NEW HAVEN [37.92, -88.16], 0.4 W SPRINGERTON [38.18, -88.36], 0.5 W MILL SHOALS [38.25, -88.36], 1.3 SW BURNT PRAIRIE [38.23, -88.28], 0.9 E CARMI MUNI ARPT [38.10, -88.13]

Major flooding continued on the Little Wabash River from April. At the Carmi river gage, the river crested at 38.34 feet on May 3. This reading was the second highest on record, missing the record level set in 1961 by only about an inch. Due to flooding of the Little Wabash River, the bridge on Route 1 and several low-lying streets in Carmi were closed. At least ten businesses in East Carmi were flooded. The businesses were closed for up to three weeks. Flooding damaged or cut off access to about 20 homes and a church. Backwater from the Little Wabash River caused major flooding on the Skillet Fork River in the Mill Shoals and Springerton areas. Some sandbagging was done in Mill Shoals, and a section of U.S. 45 was closed. County and city schools were closed.

WHITE COUNTY --- MAUNIE [38.03, -88.05], 3.0 ENE PHILLIPSTOWN [38.17, -87.97], 4.4 E PHILLIPSTOWN [38.16, -87.94], 3.3 ENE MAUNIE [38.05, -88.00]

Major flooding continued on the Wabash River from April. At the New Harmony (Indiana) river gage, the river crested at 23.67 feet on May 4. This level was the fourth highest crest on record, exceeding the 2005 flood by about six inches. This was the highest level since 1943. Sandbagging began to prevent Wabash River floodwaters from entering the Grayville water plant. Several homes in Grayville were threatened by rising water, and water entered a number of basements. The approach to the bridge to Maunie was washed out. The 172 residents of Maunie were asked to evacuate, but 42 of them did not. An airboat was brought in by Illinois police to shuttle supplies into the isolated community and evacuate medical patients. The airboats were used to assist residents in the communities of Dogtown and Concord that were isolated by floodwaters. In New Haven, a combination of Little Wabash River floodwater and Wabash River backwater flooded more than a dozen homes.

WILLIAMSON COUNTY --- FREEMAN SPUR [37.85, -89.00], 1.9 NNE BUSH [37.86, -89.12], 0.5 N HURST [37.84, -89.15], 1.3 SSW BLAIRSVILLE [37.80, -89.14]

Record flooding occurred on the Big Muddy River. At the Murphysboro river gage, the river crested at 40.42 feet on the early morning of May 2. This exceeded the old record set in 1961 by over a foot. At least a few homes at the edge of Herrin sustained major flooding damage. A bridge near Hurst was threatened by the rising river, prompting schools to dismiss early. Water was flowing over the bridge, and the stability of the bridge was uncertain.

Location Date/Time Deaths & Property & Event Type and Details Injuries Crop Dmg

Heavy rainfall in March set the stage for major flooding when record-setting rains fell in April and May. At Paducah, 15.91 inches of rain fell in April, which was 10.96 inches above normal. It was not only the wettest April on record, but the wettest month ever recorded at Paducah. In May, 8.74 inches of rain fell. This was 3.99 inches above normal for the month. Paducah had the wettest meteorological spring (March through May) period on record with 31.21 inches. This was 63 percent of the normal for an entire year. At Evansville, April was the second wettest April on record with 11.77 inches. For the season, Evansville had the second wettest meteorological spring with 25.01 inches. The result of all this rain was rapid and dramatic rises on rivers. Record flood crests occurred on some rivers, inundating numerous homes and businesses. There were major impacts to transportation both on land and water. There were numerous closed roads across the region, leading to often lengthy detours. Because of the high water, there were numerous day and nighttime restrictions to barge traffic. Hundreds of thousands of acres of farmland were flooded. Crops were late getting planted.

Aerial photo of the confluence of the Mississippi and Ohio Rivers near Cairo on May 5, more than two days after the activation of the New Madrid Floodway. The U.S. Highway 60 bridges over the Ohio River and Mississippi River are visible. Between the bridges is the southernmost peninsula of Illinois. View is from the Kentucky side of the Ohio River looking across the peninsula to a vast expanse of flooded Missouri farmland. Photo courtesy of Civil Air Patrol.

came between April 30 and May 2. Numerous rounds of showers and thunderstorms produced additional average rainfall amounts of 4 to 6 inches. Between 9 and 22 inches of rain fell across the region between April 22 and May 3. Most creeks and streams flooded for an extended period of time. Some of the flooding was major. The Saline River threatened some homes and businesses in parts of Saline County around Muddy, Eldorado, and Harrisburg. In Carbondale, more than 30 mobile homes were flooded at a trailer park that was inundated by Crab Orchard Creek. A disaster proclamation was issued by the governor of Illinois due to the damage from flooding and severe storms. The National Guard was deployed to assist with sandbagging and other operations. Numerous roads were flooded and closed across southern Illinois, including some major state roads. At the peak of the flooding, 41 county and state roads were closed in Williamson County alone. A number of bridges were underwater. About 50,000 acres of farmland was flooded in Hamilton County. The flood damage from creeks and small rivers was considered to be lower than the historic March, 2008 flood in most areas. including Harrisburg. Flood gates installed around Harrisburg prevented a repeat of the massive 2008 flood, but Illinois Route 34 was closed by the flood gate. Businesses in Harrisburg sandbagged in anticipation of possible flooding, but few if any businesses were flooded.

ALEXANDER COUNTY FAYVILLE [37.17, -89.43], 2.1 SSE FAYVILLE [37.14, -89.42], 0.5 SW ROTH [37.10, -89.33], 0.8 SSE CLANK [37.17, -89.32]

05/02/11 08:00 CST 50K Flash Flood (due to Dam / Levee Break)

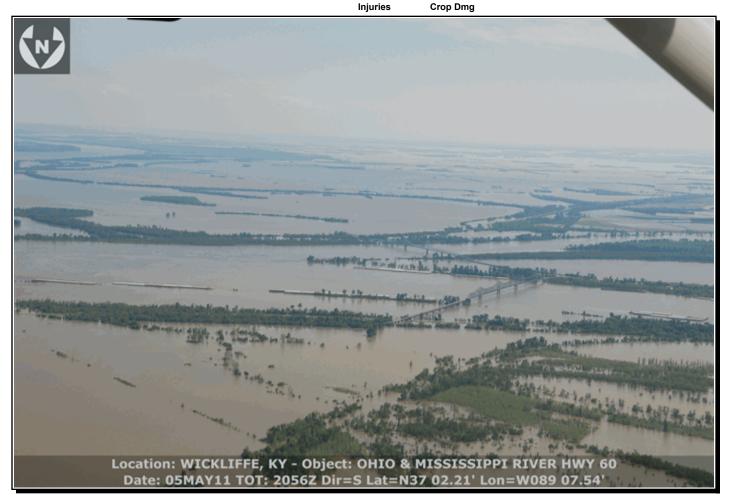

05/04/11 06:00 CST 0 Source: Emergency Manager

A major breach occurred in the Fayville levee. Despite widespread sandbagging, there was flash flooding across parts of central Alexander County. The communities of Miller City, Olive Branch, and Willard were impacted. Floodwaters covered sections of Illinois Route 3. Many homes and businesses were flooded. Olive Branch was inaccessible, and portions of Illinois Routes 3 and 37 were closed.

Heavy rainfall in March set the stage for major flooding when record-setting rains fell in April and May. At Paducah, 15.91 inches of rain fell in April, which was 10.96 inches above normal. It was not only the wettest April on record, but the wettest month ever recorded at Paducah. In May, 8.74 inches of rain fell. This was 3.99 inches above normal for the month. Paducah had the wettest meteorological spring (March through May) period on record with 31.21 inches. This was 63 percent of the normal for an entire year. At Evansville, April was the second wettest April on record with 11.77 inches. For the season, Evansville had the second wettest meteorological spring with 25.01 inches. The result of all this rain was rapid and dramatic rises on rivers. Record flood crests occurred on some rivers, inundating numerous homes and businesses. There were major impacts to transportation both on land and water. There were numerous closed roads across the region, leading to often lengthy detours. Because of the high water, there were numerous day and nighttime restrictions to barge traffic. Hundreds of thousands of acres of farmland were flooded. Crops were late getting planted.

Aerial photo of the confluence of the Mississippi and Ohio Rivers near Cairo on May 5, more than two days after the activation of the New Madrid Floodway. The U.S. Highway 60 bridges over the Ohio River and Mississippi River are visible. Between the bridges is the southernmost peninsula of Illinois. View is from the Kentucky side of the Ohio River looking across the peninsula to a vast expanse of flooded Missouri farmland. Photo courtesy of Civil Air Patrol.

Hail (0.75 in)
Source: Emergency Manager
Hail (0.75 in)
Source: Trained Spotter
Thunderstorm Wind (EG 56 kt)
Source: Trained Spotter

A tree was blown down, blocking a street. A mailbox was blown off a pole.

A mesoscale convective system tracked eastward across southern Illinois. Moderate instability existed in a corridor ahead of this system, sustaining its eastward progress. Strong and locally damaging winds occurred along the leading edge of the cold pool associated with the system. The strongest cells near the leading edge produced hail.

Numerous tree limbs and a couple of trees were blown down. One uprooted tree fell onto the back end of a school bus. Tree limbs fell on power lines, causing scattered power outages.

0

Numerous strong to severe thunderstorms occurred in the warm sector of a low pressure system over central Missouri. The air mass in the warm sector was very unstable, with afternoon mixed-layer cape values in the 2500 to 4000 j/kg range. A 65 to 75 knot mid level jet was located across Arkansas, with the nose of the jet moving into western Kentucky. This feature enhanced the lift and strong deep-layer shear already in place, creating an environment very favorable for supercells and tornadoes. A 40 to 55 knot low level jet across eastern Arkansas moved into western Kentucky during the evening, resulting in isolated tornadoes and widespread damaging winds.

Record flooding occurred on the Wabash River. At the Mount Carmel, Illinois river gage, the river crested at 34.02 feet on May 3. The old record that was set in the January, 2005 flood was broken by less than an inch. Extensive flooding of farmland occurred near the Wabash River, especially near the confluence with the flooded White River. A number of lowland residents were evacuated. Many roadways were closed.

GIBSON COUNTY --- HAZLETON [38.48, -87.53], 1.6 ENE EAST MT CARMEL [38.41, -87.70], 1.4 NNE EAST MT CARMEL [38.42, -87.72], 1.7 NNE HAZLETON [38.50, -87.52]

Major flooding continued on the White River from April. At the Hazleton river gage, the river crested at 29.80 feet on May 4. This was tied for the fourth highest crest on record, and less than two feet below the January, 2005 flood. Boils occurred in the Hazleton levee. Since the levee was upgraded after the January, 2005 flood, it was able to withstand a crest of 31.5 feet. Local levees were at critical levels. Flood fighting and/or evacuations were in progress. Oil fields and residential areas on the river side of the levees flooded extensively. Many evacuations or relocations were necessary. Water was more than 3 feet deep in the west end of Hazleton. People in residential cabins on the riverward side of the levee relocated. Many local roads were completely impassable. Oil fields were inaccessible. Water pumps were installed on the west end of Hazleton. Extensive river flooding occurred in northern Gibson County. Numerous county roads were flooded.

PIKE COUNTY --- 0.9 WSW AYRSHIRE [38.37, -87.25], 1.1 NW AYRSHIRE [38.39, -87.25], 3.1 E WINSLOW [38.38, -87.16], 2.3 NNE AUGUSTA [38.36, -87.17]

Major flooding continued on the White River from April. At the Petersburg river gage, the river crested at 26.88 feet on May 3. This was the fifth highest crest on record, and less than a foot below the January, 2005 flood. The Dodge City area flooded extensively. Levees were monitored, but no major problems were reported. Numerous roads flooded. Flood waters approached State Road 56 near Bowman. Livestock were moved. Several bottomland roads were flooded, some by several feet of water. Flooded roads east of State Route 57 included County Roads 750N, 600N, and 1000E. Pike County roads flooded west of State Route 57 included County Roads 250W, 400W, 675N, 700N, 1000W, 900W, 700W, and 775W.

Major flooding continued on the Wabash River from April. At the New Harmony river gage, the river crested at 23.67 feet on May 4. This level was the fourth highest crest on record, exceeding the 2005 flood by about six inches. This was the highest level since 1943. The National Guard assisted with sandbagging efforts along the Wabash River in the New Harmony area. Miles of farmland were flooded near the confluence of the Wabash and Ohio Rivers, both of which were well above flood stage. A number of lowland residents were evacuated. Many roads were closed. Some communities were accessible by boat only.

SPENCER COUNTY --- ROCKPORT [37.88, -87.05], 2.3 SSW AFRICA [37.80, -87.08], 2.5 S AFRICA [37.79, -87.07], 0.9 SE ROCKPORT [37.87, -87.04]

Minor flooding continued on the Ohio River from April. At the Evansville river gage, the river crested at 46.78 feet on May 5. This was the 8th highest crest on record, and less than a foot below the 1997 flood. Ohio River floodwaters backed up into Pigeon Creek in the Evansville area. Widespread flooding of fields and some farm buildings occurred along Pigeon Creek, especially near Interstate 164. About 40 to 50 homes near Pigeon Creek were sandbagged or evacuated. At least 35 to 40 roads were underwater and closed. A truss bridge spanning Pigeon Creek at the mouth of the Ohio River was partially underwater. Another bridge over Pigeon Creek on the northeast side of Evansville was under about eight inches of water.

WARRICK COUNTY --- NEWBURGH [37.95, -87.42], 0.6 S NEWBURGH [37.94, -87.42], 2.9 ESE NEWBURGH [37.93, -87.37], 2.8 ESE NEWBURGH [37.93, -87.37]

Moderate flooding continued on the Ohio River from April. At the Newburgh river gage, the river continued to fall after cresting at 49.08 feet in late April. Part of Indiana Route 66 about one mile downriver from the dam was flooded. Highway 662 was flooded near the old lock and dam. Some low-lying agricultural land was flooded, forcing farmers to delay planting.

Heavy rainfall in March set the stage for major flooding when near-record rains fell in April and May. At Evansville, April was the second wettest April on record with 11.77 inches. For the season, Evansville had the second wettest meteorological spring (March through May) with 25.01 inches. The result of all this rain was rapid and dramatic rises on rivers. Record flood crests occurred on some rivers, inundating numerous homes and businesses. There were major impacts to transportation both on land and water. There were numerous closed roads across the region, leading to often lengthy detours. Because of the high water, there were numerous day and nighttime restrictions to barge traffic. Hundreds of thousands of acres of farmland were flooded. Crops were late getting planted.

Several dozen trees were uprooted or snapped. Some trees had trunks of two feet in diameter. Peak winds were estimated near 95 mph. The average path width was 35 yards.

Numerous strong to severe thunderstorms occurred in the warm sector of a low pressure system over central Missouri. The air mass in the warm sector was very unstable, with afternoon mixed-layer cape values in the 2500 to 4000 j/kg range. A 65 to 75 knot mid level jet was located across Arkansas, with the nose of the jet moving into western Kentucky. This feature enhanced the lift and strong deep-layer shear already in place, creating an environment very favorable for supercells and tornadoes. A 40 to 55 knot low level jet across eastern Arkansas moved into western Kentucky during the evening, resulting in isolated tornadoes and widespread damaging winds.

Major flooding continued on the Ohio River from April. At the Grand Chain, Illinois river gage, the flood crest of 62.20 feet on the evening of May 2 came within two feet of the record of 64.00 feet set in 1937. The activation of the New Madrid Floodway by the U.S. Army Corps of Engineers spared Ballard County from an even higher crest. With the detonation of the Mississippi River levee at Birds Point, Missouri, the Ohio River dropped suddenly at Grand Chain. Grand Chain is located across from Ballard County. Some homes were evacuated, primarily in areas around Oscar. The total number of flooded homes was likely between 20 and 30.

Record flooding occurred along the Mississippi River near and below the confluence of the Ohio River. The river gages at both Cairo, Illinois and New Madrid, Missouri measured record high levels exceeding the 1937 record flood. The activation of the New Madrid Floodway by the U.S. Army Corps of Engineers on the evening of May 2 spared Ballard County from an even higher crest. With the detonation of the Mississippi River levee at Birds Point, Missouri, the Mississippi River dropped suddenly. Historic flooding of the Mississippi River inundated low-lying sections of Wickliffe. A few evacuations were required, and homes were sandbagged. All main arteries into and out of Wickliffe were closed except U.S. Highway 60. A section of U.S. Highway 51 was closed south of Wickliffe near a large paper mill. The paper mill was shut down for weeks. The bridge over the Ohio River on U.S. Highway 51/60/62 was closed when sections of the road leading to the bridge were covered by several feet of water.

CARLISLE COUNTY --- 2.5 WSW WINNFORD [36.90, -89.11], 1.9 W BERKELEY [36.80, -89.13], 0.5 ENE BERKELEY [36.80, -89.09], 1.8 SSW WINNFORD [36.90, -89.08]

Major flooding continued on the Ohio River from April. Based on data from river gages in nearby Pope and Gallatin Counties in Illinois, the flood crest of 2011 was two to three feet higher than the 1997 flood. This was still 6 to 9 feet lower than the record crest set in 1937. The activation of the New Madrid Floodway by the U.S. Army Corps of Engineers spared Crittenden County from an even higher crest that would have inundated even larger areas of the county. With the detonation of the Mississippi River levee at Birds Point, Missouri, the Ohio River stopped rising or rose much more slowly. The community of Tolu was evacuated, and water was halfway up the windows of a house in Tolu. U.S. Highway 60 was closed just west of the Tradewater River bridge. Backwater from the Ohio River contributed to major flooding on the Tradewater River. About two dozen houses were flooded or threatened countywide.

DAVIESS COUNTY --- OWENSBORO [37.77, -87.12], 3.4 N NEWMAN [37.88, -87.29], 1.7 N NEWMAN [37.85, -87.30], 1.2 SW OWENSBORO [37.76, -87.14]

Moderate flooding occurred on the Ohio River. At the Owensboro river gage, the river continued to fall after cresting at 46.30 feet in late April. A riverside park and parts of Water Street in Owensboro were flooded. At the peak of the flooding, Panther Creek flooded extensively due to backwater from the Ohio River, which forced some evacuations of residents in the Pettit area. Panther Creek covered parts of U.S. Highway 431 and surrounded a few major businesses such a home improvement store. Ohio River backwater worsened flooding of the Green River, flooding a house in Curdsville with a foot of water. The Red Cross opened a shelter. Countywide, 63 county roads and 18 state roads were closed at the peak of the flooding. About a dozen county roads were damaged. The damage consisted mostly of washed out shoulders and bridge approaches.

FULTON COUNTY --- HICKMAN [36.57, -89.18], 2.1 W TYLER [36.50, -89.39], 3.2 WNW SASSAFRAS RIDGE [36.56, -89.39], 2.4 NNW HICKMAN [36.60, -89.20]

Record flooding occurred on the Mississippi River. At the New Madrid, Missouri river gage, the flood crest of 48.35 feet on the night of May 5 broke the previous record (set in 1937) by a few inches. Historic flooding of the Mississippi River severely tested the strength of levees and floodwalls protecting Hickman. Numerous sand boils formed, but the levees remain intact. The bottomlands in the Hickman area were evacuated, and Kentucky Highway 94 was closed in many areas.

HENDERSON COUNTY --- 2.9 N BASKETT [37.91, -87.47], 4.0 N HENDERSON [37.89, -87.58], 2.0 S ALZEY [37.84, -87.82], 1.9 SSE SMITH MILLS [37.78, -87.76], 2.7 WSW BASKETT [37.85, -87.51]

Flooding continued on the Ohio River from April. At the Evansville, Indiana river gage, the river crested at 46.78 feet on May 5. This was the 8th highest crest on record, and less than a foot below the 1997 flood. Due to Ohio River flooding, a horse-racing track was surrounded by floodwater. A preliminary estimate of the number of flooded homes ranges from 100 to 200. Near the confluence of the Green and Ohio Rivers, a number of homes were enveloped by water near Spottsville. At least 80 county roads and a much smaller number of state roads were closed by flooding. U.S. Highway 60 was closed from Spottsville to the Daviess County line. A Red Cross shelter was opened for a very small number of evacuees, mostly from the Reed and Beals communities. The National Guard was activated. There was considerable flooding of low-lying agricultural land, forcing farmers to delay planting.

LIVINGSTON COUNTY --- BIRDSVILLE [37.22, -88.45], 1.6 ENE SMITHLAND [37.14, -88.37], 1.9 SE SMITHLAND [37.11, -88.38], 1.1 ESE LEDBETTER [37.04, -88.46]

05/01/11 00:00 CST 4M Flood (due to Heavy Rain) 05/20/11 08:00 CST 0 Source: River/Stream Gage

Record flooding occurred on the Ohio River. At the Smithland river gage, the flood crest of 54.89 feet on the morning of May 6 was about 3.5 feet higher than the 1997 flood. The activation of the New Madrid Floodway by the U.S. Army Corps of Engineers spared the city of Smithland from an even higher crest that would likely have overtopped the makeshift levee protecting the city. The levee was on the verge of failure before the levee was blown up on the Mississippi River. With the detonation of the Mississippi River levee at Birds Point, Missouri, the Ohio River stopped rising or rose much more slowly at the Smithland gage. Due to flooding of the Ohio River, there was extensive sandbagging, and a temporary levee was constructed around Smithland. Homeowners were evacuated from Smithland and many other low-lying areas from Birdsville to Ledbetter. Lower sections of Ledbetter were evacuated. Preliminary estimates were that around 100 homes were flooded, up to the roofline in a couple of cases. Temporary shelters were set up for evacuees. Floodwaters entered a gas station on U.S. Highway 60 in Smithland. Several state roads were closed, along with numerous county roads. U.S. Highway 60 was closed to through traffic at Smithland, and sections of U.S. Highway 60 were raised above floodwaters in the Ledbetter area. Police established checkpoints on U.S. 60 to keep out sightseers.

MCCRACKEN COUNTY --- PADUCAH [37.08, -88.63], 1.9 E ROSSINGTON [37.15, -88.80], 3.1 ENE ROSSINGTON [37.16, -88.78], 2.0 ESE ROWLANDTOWN [37.09, -88.60], 3.4 NE REIDLAND [37.06, -88.49], 6.2 SE SHADY GROVE [36.91, -88.45], 2.2 SSE HARDMONEY [36.92, -88.58]

Major flooding continued on the Ohio River from April. At the Paducah river gage, the flood crest of 55.03 feet around noon on May 5 was over three feet higher than the 1997 flood. This was still several feet lower than the record crest set in 1937. The activation of the New Madrid Floodway by the U.S. Army Corps of Engineers spared McCracken County from an even higher crest that would have inundated even larger areas of the county. With the detonation of the Mississippi River levee at Birds Point, Missouri, the Ohio River stopped rising or rose much more slowly at the Paducah gage. The flood gates were installed in the floodwall protecting the city of Paducah. Low-lying areas outside of the levee and floodwall protection system were flooded, displacing hundreds of residents. Preliminary estimates were that between 200 and 500 homes were flooded, some beyond repair. Many of the homes were located in the Clarks River floodplain, where water was nearly up to the second floor of one home. Ohio River backwater worsened flooding along the Clarks River, which empties into the Ohio between Reidland and Paducah. A mobile home was nearly completely submerged. Over a dozen water rescues were conducted. Water marks along tree lines were at least ten feet high in many locations near the Clarks River. Besides flooding numerous homes, the river submerged a small airport and a car-racing track. Many state roads were closed, making travel around the county difficult. The bridge carrying U.S. Route 45 over the Ohio River was closed due to water over the approaches. At the peak of the flooding, at least 60 roads were closed in McCracken County. Floodwaters crept toward U.S. Highway 60 in the city of Paducah outside the levee, but very few structures were affected on Route 60. The main exception was a major grocery store next to the levee, which was forced to close. A convention center located on the river side of the floodwall was saved by the construction of a makeshift levee.

MCLEAN COUNTY --- 0.6 NNE LIVERMORE [37.49, -87.13], 0.6 NNW CALHOUN [37.54, -87.27], 0.8 WSW RUMSEY [37.52, -87.28], 1.9 SSE LIVERMORE [37.45, -87.12]

Major flooding continued on the Ohio River from April. At the Uniontown river gage, the flood crest of 56.94 feet on the morning of May 6 was about three feet higher than the 1997 flood. This was still over seven feet lower than the record crest set in 1937. The Ohio River floodgates were installed on Kentucky Highway 923 at Sturgis. This was the first time since the March 1997 flood that such actions were required. Sandbagging was done to protect some houses. Several county roads were closed, as was the main traffic artery through the county, U.S. Highway 60. There were at least 14 state highways and 18 county roads posted as closed in Union County.

Heavy rainfall in March set the stage for major flooding when record-setting rains fell in April and May. At Paducah, 15.91 inches of rain fell in April, which was 10.96 inches above normal. It was not only the wettest April on record, but the wettest month ever recorded at Paducah. In May, 8.74 inches of rain fell. This was 3.99 inches above normal for the month. Paducah had the wettest meteorological spring (March through May) period on record with 31.21 inches. This was 63 percent of the normal for an entire year. At Evansville, April was the second wettest April on record with 11.77 inches. For the season, Evansville had the second wettest meteorological spring with 25.01 inches. The result of all this rain was rapid and dramatic rises on rivers. Record flood crests occurred on some rivers, inundating numerous homes and businesses. There were major impacts to transportation both on land and water. There were numerous closed roads across the region, leading to often lengthy detours. Because of the high water, there were numerous day and nighttime restrictions to barge traffic. Hundreds of thousands of acres of farmland were flooded. Crops were late getting planted.

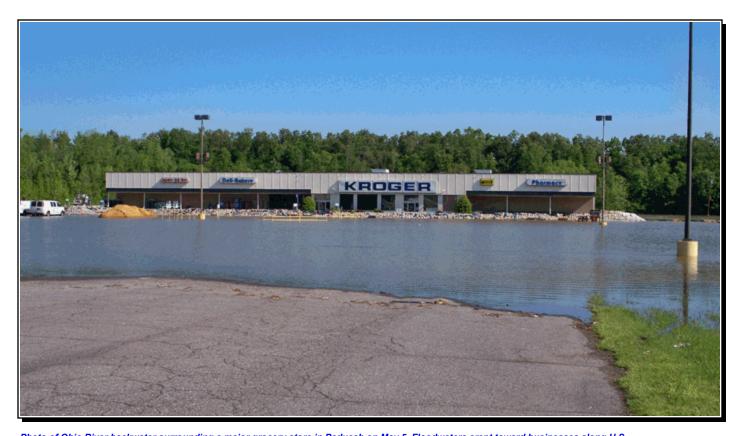

Photo of Ohio River backwater surrounding a major grocery store in Paducah on May 5. Floodwaters crept toward businesses along U.S. Highway 60 between Interstate 24 and the levee protecting inner parts of Paducah. This store was impacted more than any other business on Highway 60. Photo from Mike York, NWS Paducah.

Highway 109 was closed five miles northwest of F	Providence. Highway 109 was	reduced to one la	ane at the bridge so	outh of town.
Widespread flooding continued from April into came between April 30 and May 2. Numerous roto 6 inches, which caused isolated flash floodin Most creeks and streams flooded for an extendiclosed, including some major state roads such	May across western Kentuc ounds of showers and thund g. Between 9 and 22 inches ed period of time. Some of t	ky. Following exc erstorms produce of rain fell across he flooding was n	essive rain in Apri ed additional avera s the region betwe najor. Numerous r	il, a final dose of heavy rain age rainfall amounts of 4 en April 22 and May 3. oads were flooded and

large number of flooded roads. A bridge was washed out over Mayfield Creek near the Graves and McCracken County line. Some of the smaller rivers that flooded included the Tradewater River in Webster County and the Clarks River in Marshall and northeast Graves Counties. Roads were closed near each river. Some homes and businesses were sandbagged. All main roads to Providence in Webster County were closed. The communities of Clay and Blackford in Webster County were isolated by flooding, accessible by boat only. Lake Barkley and Kentucky Lake rose rapidly, breaking record levels at the beginning of the month. Both lakes reached around 372.5 feet by May 4. The top of the gates at Kentucky Dam are at 375 feet. Lakeshore flooding forced the closure of recreational facilities and roads, including portions of the Land Between The Lakes National Recreation Area. Campgrounds along the lake were flooded. Marinas were

	nose of the jet moving into western			-

Numerous strong to severe thunderstorms occurred in the warm sector of a low pressure system over central Missouri. The air mass in the warm sector was very unstable, with afternoon mixed-layer cape values in the 2500 to 4000 j/kg range. A 65 to 75 knot mid level jet was located across Arkansas, with the nose of the jet moving into western Kentucky. This feature enhanced the lift and strong deep-layer shear already in place, creating an environment very favorable for supercells and tornadoes. A 40 to 55 knot low level jet across eastern Arkansas moved into western Kentucky during the evening, resulting in isolated tornadoes and widespread damaging winds.

MISSOURI, Southeast

Major flooding continued on the St. Francis River from April. At the Fisk river gage, the river crested at 27.10 feet on the evening of May 3. This was the second highest crest on record, exceeded only by a crest of 28.00 feet in April of 1927. The river came within inches of overtopping a levee on the left bank. Much of Fisk was evacuated. At least one house was inaccessible by vehicle because of floodwaters.

Major flooding that began in April continued along the Mississippi River. At Cape Girardeau, the river crested at 46.28 feet on May 2. This was the fourth highest crest on record, surpassed only by the floods of 1993 and 1995. The activation of the New Madrid Floodway by the U.S. Army Corps of Engineers spared Cape Girardeau County from an even higher crest. With the detonation of the Mississippi River levee at Birds Point, Missouri, the river began to drop. Floodwaters backed up creeks and diversion channels across southern parts of Cape Girardeau County, threatening areas along Highway 74 out to Dutchtown. A combination of Mississippi River backwater and headwater from small tributaries such as the Whitewater River caused problems as far inland as Delta and Allenville. Crews built an emergency levee along Highway 74 near Highway 25 to protect Dutchtown. Highways 74 and 25 were closed. Water rose two to three feet high on the levee. Voluntary evacuations were requested in the Allenville area, where water blocked all roads into town. A couple of houses were flooded in Allenville, where at least one water rescue was conducted. Countywide, more than 30 county roads were closed. The Red Cross opened a shelter for flood victims. In Cape Girardeau, several homes and a couple of businesses were sandbagged in an area known as the "Red Star" neighborhood. More than 15 streets were closed by flooding in the city on both the north and south sides of town.

Historic flooding continued along the Mississippi River from April. Levees protected large parts of the county until the evening of May 2, when the U.S. Army Corps of Engineers detonated the levee at Birds Point. The levee was opened as part of the activation of the New Madrid Floodway. The floodway was opened to relieve pressure on levees along the lower Ohio River and parts of the Mississippi River. Much of the floodway land is located in Mississippi County. Flooding caused by the intentional levee breaks is detailed in a flash flood entry located elsewhere in this report. The communities of East Prairie and Anniston were threatened by extensive backwater flooding. Widespread street flooding occurred in both communities. Large pumps kept water levels manageable in both cities.

NEW MADRID COUNTY --- NEW MADRID [36.60, -89.53], 4.5 ESE NEW MADRID [36.57, -89.46], 4.1 SE NEW MADRID [36.56, -89.48], 1.9 ESE HOWARDVILLE [36.57, -89.55], 2.2 ENE NEW MADRID CO MEM AR [36.54, -89.56], 1.8 NE NEW MADRID CO MEM AR [36.55, -89.58]

Record flooding occurred on the Mississippi River. At the New Madrid river gage, the flood crest of 48.35 feet on the night of May 5 broke the previous record (set in 1937) by a few inches. The levee protecting the city of New Madrid held the water back, but seepwater caused a number of problems. Many city streets were damaged in New Madrid, including the formation of sinkholes once the water receded. One home was damaged by the seepwater, with water about an inch deep. Some basements were flooded with seepwater. Outside the levee system, the sewer treatment plant for New Madrid was in danger of being flooded. Floodfighting efforts were effective in saving the plant. Interstate 55 was reduced to one lane in both directions at the St. Johns Bayou due to sandbagging operations.

PERRY COUNTY --- ALTENBURG [37.63, -89.58], 1.2 SE BELGIQUE [37.82, -89.76], 3.1 NNE MENFRO [37.81, -89.70], 0.6 SE WITTENBURG [37.64, -89.52]

Major flooding continued from April along the Mississippi River. Several roads were closed, including Highway E near Menfro. Most of the other roads were rural county roads. A main railway was closed due to water over the tracks.

SCOTT COUNTY --- COMMERCE [37.15, -89.45], 0.3 NE ILLMO [37.22, -89.50], 1.8 E ILLMO [37.22, -89.47], 1.1 ENE COMMERCE [37.16, -89.43]

Major flooding continued from April on the Mississippi River. At the Thebes, Illinois river gage, the flood crest of 45.52 feet on the night of May 2 was the second highest crest on record. The record crest was 45.91 feet in May of 1995. The activation of the New Madrid Floodway by the U.S. Army Corps of Engineers spared the county from an even higher crest. With the detonation of the Mississippi River levee at Birds Point, Missouri, the river dropped suddenly. A combination of Mississippi River backwater and headwaters from the Whitewater River caused flooding as far inland as Chaffee. In Chaffee, a nursing home was sandbagged after its parking lot flooded. Many homes and other structures along Highway 77 were surrounded by water. At least one street was closed in Chaffee. In an area around Sikeston, sixty homes were threatened by backwater from the St. Johns Bayou. Many school districts were closed. U.S. Highway 62 was closed east of Interstate 55. A couple dozen homes were threatened in Commerce, causing a partial evacuation of the town. The breach of a private agricultural levee flooded thousands of acres of farmland and flooded even more of Commerce. A large portion of Route EE was closed.

STODDARD COUNTY --- 3.4 WNW SHOVER [36.71, -90.15], 2.6 SW DUDLEY [36.75, -90.13], 2.3 SSW ASHERVILLE [36.87, -90.19], 1.3 SSW DALE [36.86, -90.24]

Major flooding continued on the St. Francis River from April. At the Fisk river gage, the river crested at 27.10 feet on the evening of May 3. This was the second highest crest on record, exceeded only by a crest of 28.00 feet in April of 1927. The river came within inches of overtopping a levee on the left bank. Extensive flooding occurred on the Stoddard County side of the river. The Moccasin Flats area was completely submerged, forcing residents to evacuate by boat. Voluntary evacuations were conducted across the western quarter of the county, including the Puxico, Dudley, and Powe areas. All residents in the Powe area evacuated. Red Cross shelters were opened around the area. The eastbound exit ramp from U.S. Highway 60 to Highway 51 was flooded. Floodwaters endangered the eastbound lanes of Highway 60. Damage to county roads near the river was extensive. Three bridges were washed out. State Highway 51 was closed from County Road 279 to the Mingo National Wildlife Refuge.

WAYNE COUNTY --- 4.1 ENE TASKEE STATION [36.99, -90.41], 4.2 NW LAKE WAPPAPELLO [36.99, -90.37], 2.8 WSW LODI [37.23, -90.49], 4.2 WSW LODI [37.23, -90.52]

Moderate flooding continued from April on the St. Francis River. At the Patterson river gage, the river crested at 30.94 feet on the evening of May 2. This was the fifth highest flood crest on record, only an inch below the May, 2002 flood crest. Flooding was much more severe downriver near Greenville due to flooding of Lake Wappapello, which was formed by a dam on the St. Francis River. A storage facility and a restaurant in Greenville were flooded. County schools were closed for days due to numerous road closures. Residents in Greenville built a dirt levee across old U.S. Highway 67 to protect the town from flooding of the lake. The backwater from the lake reached all of the streets leading into town, effectively isolating the town. Floodwaters reached the girders of the four-lane bridge on U.S. Highway 67 south of Greenville. Lake Wappapello reached its highest level on record. A temporary dike three feet high was constructed of sandbags at Wappapello Dam's spillway in an attempt to control overtopping. The dike was eventually overtopped, and an uncontrolled release of water washed out Highway T. Lake levels impinged on sections of U.S. Highway 67 and State Route 34. State Route 34 was sandbagged east of Patterson in an attempt to keep it open, but Route 34 was closed between Highways 67 and 143. Up to four feet of water covered the road. The northbound lanes of U.S. 67 were closed for 1.5 miles near Otter Creek. Officials detoured northbound traffic into one southbound lane.

Heavy rainfall in March set the stage for major flooding when record-setting rains fell in April and May. At Cape Girardeau, 31.85 inches of rain fell between March and May. This set the record for the wettest meteorological spring (March through May) and was 68 percent of the normal rainfall for the entire year. The result of all this rain was rapid and dramatic rises on rivers. Record flood crests occurred on some rivers, inundating numerous homes and businesses. There were major impacts to transportation both on land and water. There were numerous closed roads across the region, leading to often lengthy detours. Because of the high water, there were numerous day and nighttime restrictions to barge traffic. Hundreds of thousands of acres of farmland were flooded. Crops were late getting planted.

Widespread flooding continued from April into May across southeast Missouri. Following excessive rain in April, a final dose of heavy rain came between April 30 and May 2. Numerous rounds of showers and thunderstorms produced additional average rainfall amounts of 4 to 6 inches. Between 9 and 22 inches of rain fell across the region between April 22 and May 3. Most creeks and streams flooded for an extended period of time. Some of the flooding was major. Numerous roads were flooded and closed, including some major state highways in each county. About 150 state roads were closed in southeast Missouri at the peak of the flooding. A number of road washouts were reported across southeast Missouri. One concrete bridge was washed out on County Road 410 in Stoddard County. A mudslide on County Road 451 in Butler County was an example of numerous flood-damaged roads there. Another mudslide closed one lane of U.S. Highway 67 in Wayne County. Railroad tracks were blocked by a mudslide near Williamsville in Wayne County. Some homes were sandbagged or evacuated across southeast Missouri, and there were reports of people trapped in their homes due to flooded access roads. Water rescues were conducted due to motorists driving into flooded areas. Some schools cancelled or delayed classes due to the large number of inaccessible homes. An agricultural levee on the Little River was breached near Baderville in New Madrid County, affecting large tracts of farmland. Significant flooding continued in Morehouse due to the Little River, and the westbound lanes of U.S. Highway 60 were closed. About two-thirds of the residences in Morehouse, or about 280 homes, sustained water damage. About 60 of those homes were deemed destroyed beyond repair. In the Puxico area of Stoddard County, Mingo Creek continued to flood. A water rescue was conducted in the area.

The record high level of Lake Wappapello exceeded the height of the emergency spillway at Wappapello Dam. The uncontrolled flow of water over the spillway berm washed out a 400-foot section of Highway T, taking out millions of dollars of communications infrastructure. County Road 404 was washed out. At least two homes along County Road 404 were inundated with at least a foot of water and were accessible only by boat. Five homes were directly affected by the spillway breach.

The U.S. Army Corps of Engineers activated the New Madrid Floodway by detonating a levee at Birds Point. The intentional levee breach relieved pressure on levees along the lower Ohio River and portions of the Mississippi River. The blast that opened the 11,000-foot gap in the levee shattered windows in Mississippi County and rattled windows as far away as Paducah, Kentucky. The flash flood caused by the levee breach was anticipated for days, and evacuations had been completed beforehand. Over 130,000 acres of prime farmland were submerged. About 100 homes were flooded, forcing the evacuation of 300 residents. The tiny community of Pinhook was inundated, and no decision had been made by residents on whether to rebuild the community. A primary national insurer estimated private property losses were around 100 million dollars within the floodway. Mississippi County officials estimated the cost to repair public infrastructure such as roads, bridges, and ditches was nearly 75 million dollars. The westward extent of the flash flood was limited by a second set of levees (called setback levees) designed to channel the water back toward the Mississippi River. The floodway remained submerged for the remainder of the month.

Moderate flooding occurred on the Black River. At the Poplar Bluff river gage, the river crested at 20.21 feet on May 3. Water overflowing levees that were damaged in April kept the crest from being higher. On Highway 53 southeast of Poplar Bluff, the National Guard rescued an elderly woman from chest-deep water after she drove into a flooded stretch of road. The highway was closed at the time. Some low-lying woods and fields near the river were flooded.

Heavy rainfall in March set the stage for major flooding when record-setting rains fell in April and May. At Cape Girardeau, 31.85 inches of rain fell between March and May. This set the record for the wettest meteorological spring (March through May) and was 68 percent of the normal rainfall for the entire year. About 150 state roads were closed in southeast Missouri at the peak of the flooding. A number of road washouts were reported across southeast Missouri. One concrete bridge was washed out on County Road 410 in Stoddard County. A mudslide on County Road 451 in Butler County was an example of numerous flood-damaged roads there. Another mudslide closed one lane of U.S. Highway 67 in Wayne County. Railroad tracks were blocked by a mudslide near Williamsville in Wayne County. Some homes were sandbagged or evacuated across southeast Missouri, and there were reports of people trapped in their homes due to flooded access roads. Water rescues were conducted due to motorists driving into flooded areas. Some schools cancelled or delayed classes due to the large number of inaccessible homes. An agricultural levee on the Little River was breached near Baderville in New Madrid County, affecting large tracts of farmland. Significant flooding continued in Morehouse due to the Little River, and the westbound lanes of U.S. Highway 60 were closed. About two-thirds of the residences in Morehouse, or about 280 homes, sustained water damage. About 60 of those homes were deemed destroyed beyond repair. In the Puxico area of Stoddard County, Mingo Creek continued to flood. A water rescue was conducted in the area.

Numerous strong to severe thunderstorms occurred in the warm sector of a low pressure system over central Missouri. The air mass in the warm sector was very unstable, with afternoon mixed-layer cape values in the 2500 to 4000 j/kg range. A 65 to 75 knot mid level jet was located across Arkansas, with the nose of the jet moving into western Kentucky. This feature enhanced the lift and strong deep-layer shear already in place, creating an environment very favorable for supercells and tornadoes. A 40 to 55 knot low level jet across eastern Arkansas moved into western Kentucky during the evening, resulting in a long-track strong tornado.
